3 Actions to Lift Our Satisfaction Rate Above 50%

H1 Report

Done by: Teo Hui Jie · 27 June 2026

To lift our satisfaction rate above 50%, we must win the digital experience and convert first-time Economy flyers into loyal returning passengers.

1

FIX THE THREE DIGITAL EXPERIENCE GAPS

Online Boarding, In-Flight Entertainment and Wifi are the strongest predictors of satisfaction. Passengers who rate them poorly are nearly 6x less likely to be satisfied, making these the highest-impact investments available.

2

PROTECT WHAT'S ALREADY WORKING

Returning business travellers in Business class are satisfied at 70%. This segment must be maintained while we fix the broader base, don't sacrifice the loyal core while chasing growth.

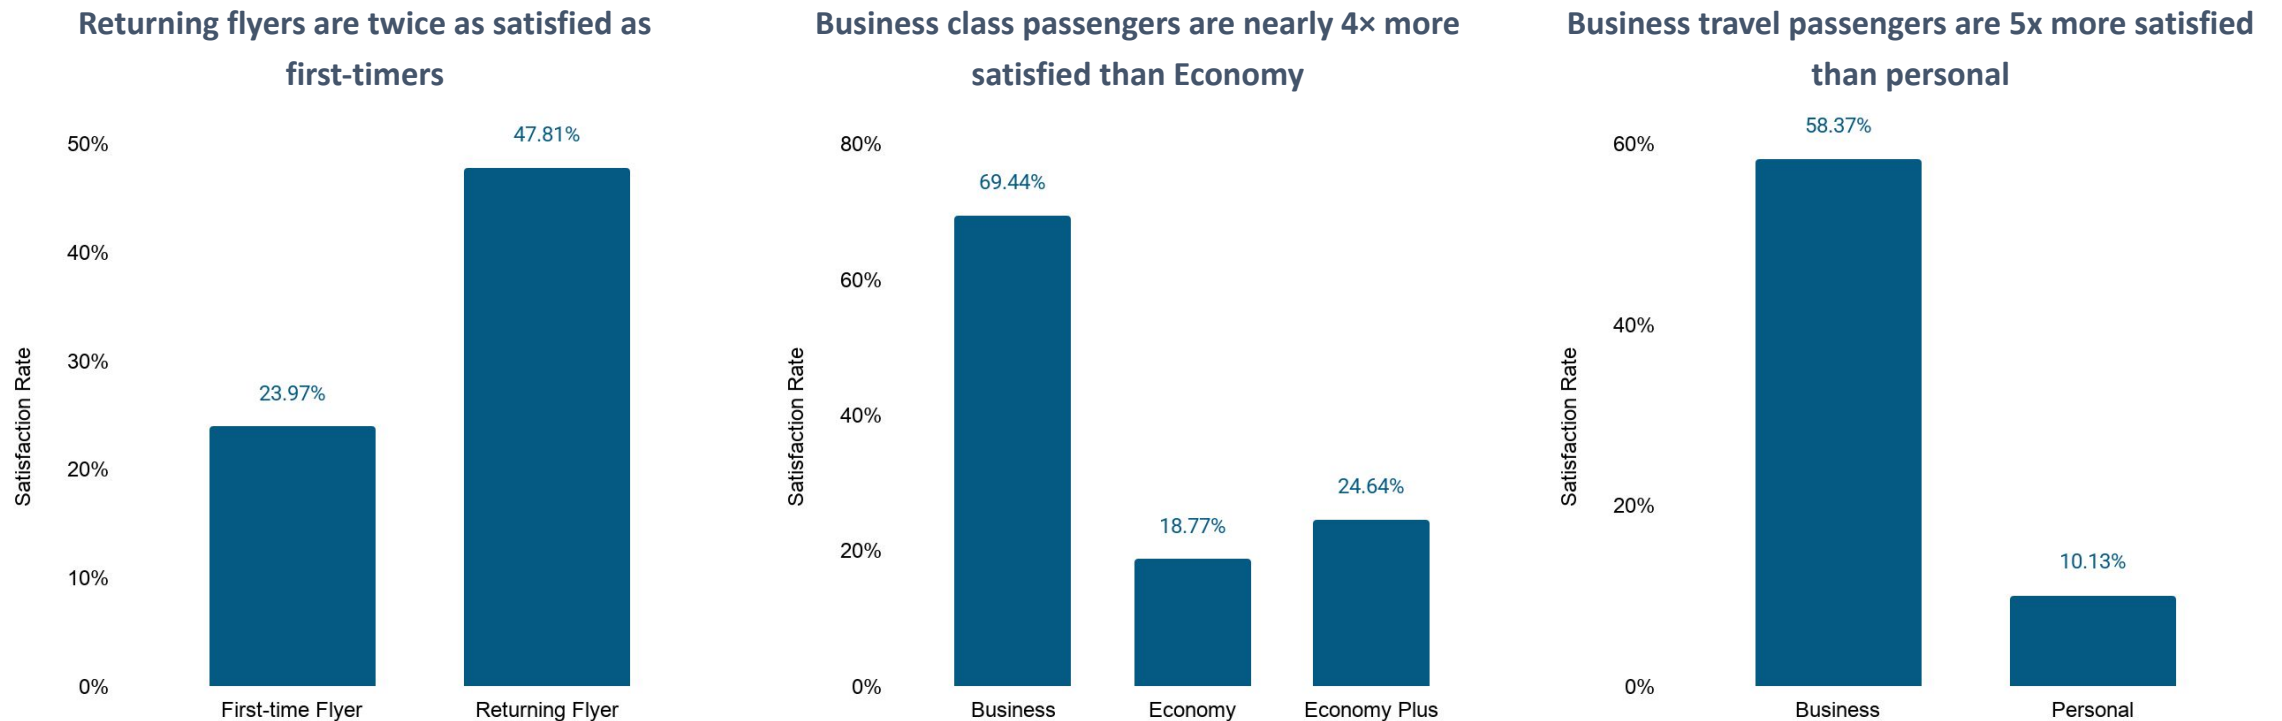

3

CONVERT FIRST-TIME ECONOMY FLYERS

18% of our base are first-time flyers and 99% travelling for business but 61% choosing Economy. A strong first Economy experience is our most direct path to building loyalty over time.

Only 43% of passengers are satisfied and almost all of them are returning business travellers in Business class.

Observation: Satisfaction is driven by returning flyers on business trips in Business class.

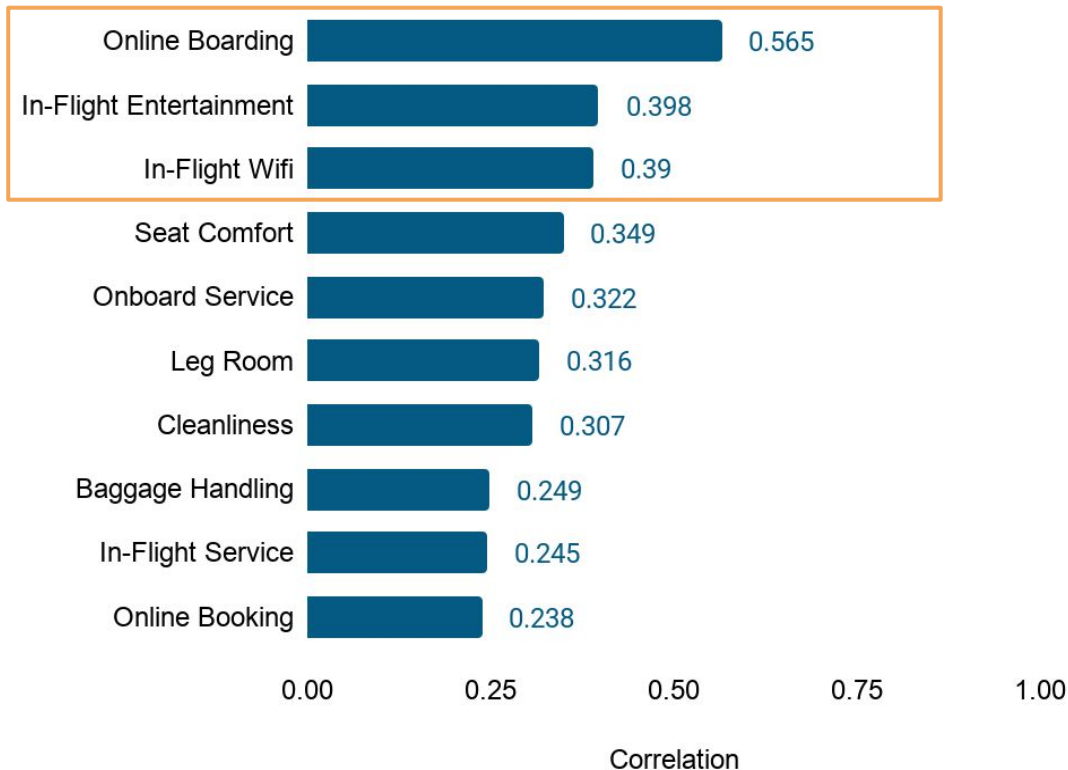

Recommendation: The majority of our passengers (first-time flyers, Economy travellers, and personal travellers) are largely dissatisfied. Therefore, converting them into loyal, returning flyers is our biggest lever for growth.

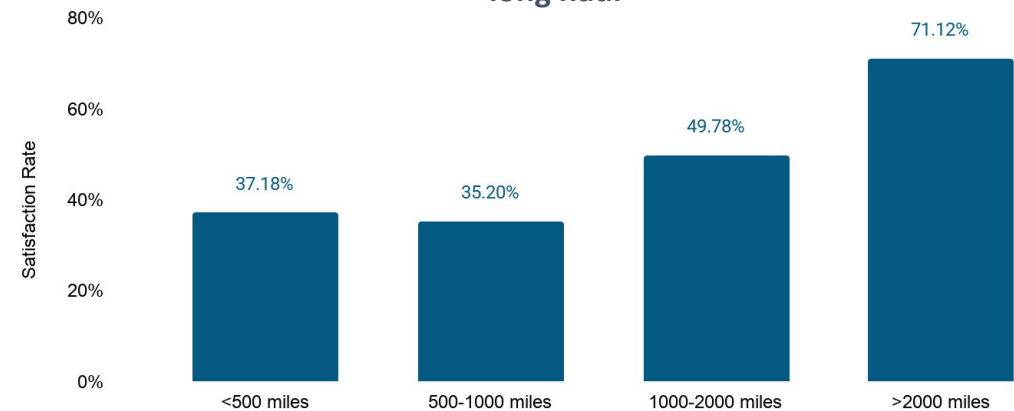

INSIGHT 2 · WHAT DRIVES SATISFACTION

Three digital experience factors that can make or break passenger satisfaction.

Prioritise online boarding, wifi and entertainment; They make or break passenger satisfaction

Satisfaction rate nearly doubles from 37% on short miles to 71% on long haul

Observation: Online Boarding, In-Flight Entertainment and Wifi are the strongest predictors of satisfaction, passengers who rate them poorly are nearly 6x less likely to be satisfied.

Recommendation: Prioritising Online Boarding, In-Flight Entertainment and Wifi across short and long haul routes is our highest impact lever to lift our satisfaction rate.

First-time flyers are younger business travellers choosing Economy, a high-potential segment we have yet to convert.

THE RETURNING FLYER PROFILE

82% of all passengers are returning flyers

41 yrs average age

62% travel for business

50% fly Business class

THE FIRST-TIME FLYER PROFILE

18% of all passengers are first-time flyers

30 yrs average age

99% travel for business

61% fly Economy class

Observation: Returning flyers dominate our base at 82%, averaging 41 years old, with 62% travelling for business and half flying Business class.

First-time flyers are a decade younger at 30, predominantly business travellers like their returning passengers, but 61% opt for Economy class.

Recommendation: First-time flyers are already business travellers, choosing Economy over Business class, suggesting cost sensitivity or lack of brand trust on a first purchase. Therefore, delivering a strong Economy experience on their first flight is the most direct way to earn their loyalty and gradually convert them into returning Business class flyers over time.

FROM INSIGHT TO ACTION

Three focused moves to push satisfaction rate past 50%

UPGRADE DIGITAL TOUCHPOINTS

Redesign the online boarding flow; invest in wifi and in-flight entertainment across all routes.

HIGHEST IMPACT

DELIVER A STANDOUT ECONOMY EXPERIENCE

Target service quality improvements specifically in Economy. This is where loyalty is won or lost with first-time flyers.

GROWTH LEVER

TRACK FIRST-TIME TO RETURNING CONVERSION

Measure how many first-time flyers return within 12 months as the north star metric for the programme.
